

# IOPMP Task Group Meeting

May 23, 2024

[Video link](#)

# Agenda

- Spec consolidation:
  - Remove global interrupt control bits for individual permissions, ire/iwe/ixe.
  - Merge global bus-error control bits for individual permissions, rre/rwe/rxe, into one bit.
  - Static configuration → pre-locked configuration.
- Move toward the stable version:
  - No other new features. Only consolidate the existing issues.
  - Rediscuss the programming model of the WorldGuard Checker. Perrine showed her slides, which will be posted on the mailing list separately.
  - Spec comments can be posted on GitHub.
